Introductory text read to respondent:

The interview you are about to complete is called the Adolescent Health Study or Add Health. It is being conducted for the Carolina Population Center at the University of North Carolina by the National Opinion Research Center (NORC). This interview will produce important information about adolescent health and health behaviors today. During the interview, you will be asked about your and your parents' backgrounds; your family; your friends; your health; your behavior related to health; and, your plans for the future. Your answers will help us to understand the health and experiences of adolescents in the U.S. today.

All of your answers to the questionnaire will be held in the strictest confidence. No one will ever be able to connect your name with your answers. They will be identified solely by a unique identification number.

Your participation in this study is voluntary. You may decline to answer any question, and you may stop at any time. There are no right or wrong answers.

During one part of the interview, I will read a series of questions and possible responses and ask you to select one or more responses to each question. I will record your responses in my computer. For another part of the interview, I will give you the computer and a set of headphones to wear. A number of questions and possible responses will be read to you over the headphones. You will enter your response to each question directly into the computer. I will show you how to operate the computer. Your answers to the questions, like all the information you provide, will be completely confidential; I will never see your answers to the questions you enter directly into the computer.
